

Instructions

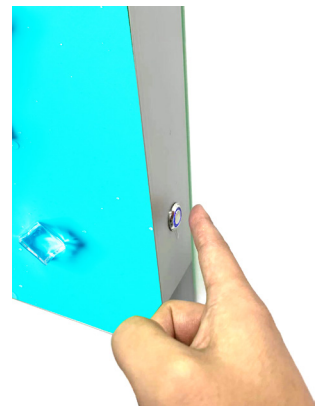

Wall Mounted SEG Lightbox

1. Carefully open the box.
2. Remove the contents and lay out neatly.
3. The lightbox frame lengths are labelled with symbols on each end.
4. Join the frame together matching up the symbols. (See Below)

5. Assemble flat rather than standing up.
6. The wiring is inside the frame so ensure the sections are inserted fully.
7. Install the fabrics front and back by slotting the silicon edging into the outward facing slot in the frame. Take care not to dirty the fabric prints.

8. It is often better to start with the corners.
9. Do not stretch the fabric and silicon edging unevenly as you may gather the fabric unevenly.
10. Install the "T" brackets into the ceiling where required using suitable fixings.
11. Plugs and screws are provided but may not be suitable for your application.
12. Clip one end of each chain to the brackets you have installed.
13. Clip the other end of each chain to the clips on the lightbox.
14. Run the power cable to your power socket and plug it in both ends.

15. Turn on and enjoy!
